Contextualization

Speed is one of the characteristics that may get people attention or drive them away.

Problem

According to Pagespeed, my current pages has a some js files impairing its load time.

Solution

Most of the JS files pointed by Pagespeed may not be deferred, but there are some files that is not shown but may be deferred.

Also, for the pages that loads YouTube videos we implemented a solution by coliff.[1]

There were also a code-snipet js file, which we has used to highlisht snippets in our web site. Now that we use Rouge, there is no point in continuing to load this file.
